

# CREATE IBM WATSON IOT PLATFORM AND DEVICE

TEAM ID	PNT2022TMID10184
PROJECT NAME	IOT Based Smart Crop Protection System for Agriculture

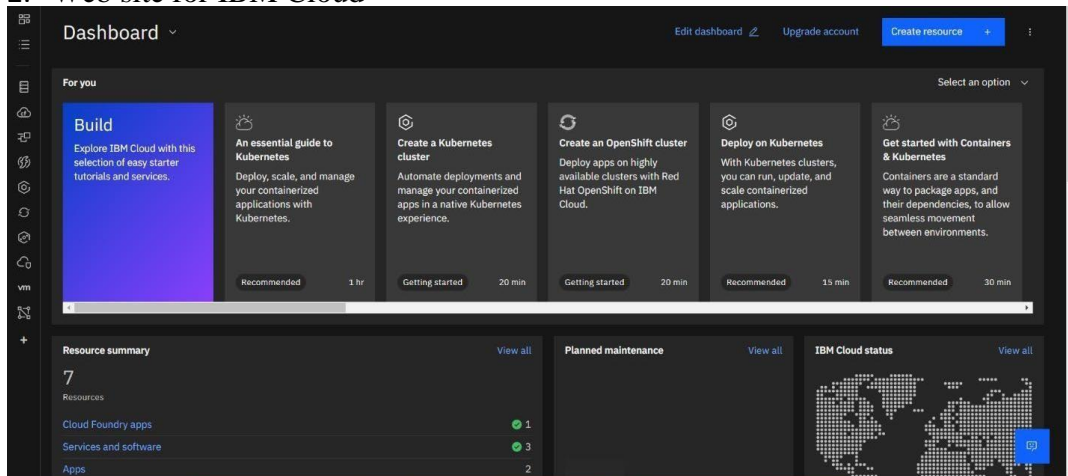

## IBM Watson IOT platform and device development

### STEPS:

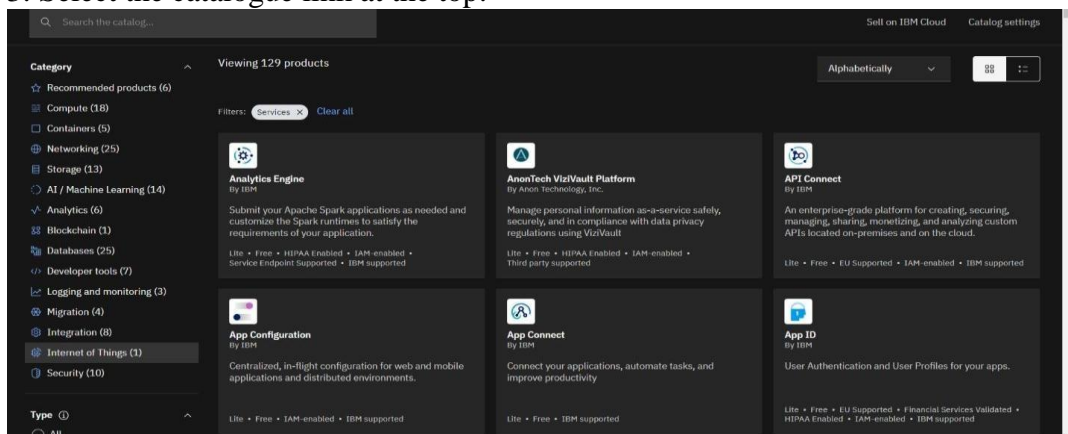

1. The unique IBM id and password are used to create an IBM cloud account.

### 2. Web site for IBM Cloud

### 3. Select the catalogue link at the top.

#### 4. Select IoT from the list of categories.

**Internet of Things Platform**

This service is the hub of all things IBM IoT, it is where you can set up and manage your connected devices so that your apps can access their live and historical data.

Let's get started with IBM Watson IoT Platform

Securely connect, control, and manage devices. Quickly build IoT applications that analyze data from the physical world.

Launch Docs

Ready for the next level?

IBM Watson IoT Platform Journey

Lite

The Lite service plan provides a lightweight development environment to get you started with the connectivity capabilities of Watson IoT Platform.

- Free

Non-Production

The Non-Production service plan is a full-featured, fully-integrated offering that enables you to explore Watson IoT Platform to see how the service can fit into your IoT environment.

- Starts at \$500 per month

Production

The Production service is a fully managed SaaS offering that enables you to manage and analyze enterprise IoT data.

- Includes IBM Service & Support

9. The connection is used to link IOT with other services, while manage is for launch and plan informs us about the payment package and its upgrades.

10. When you click the launch button on the Manage tab, this page will appear.

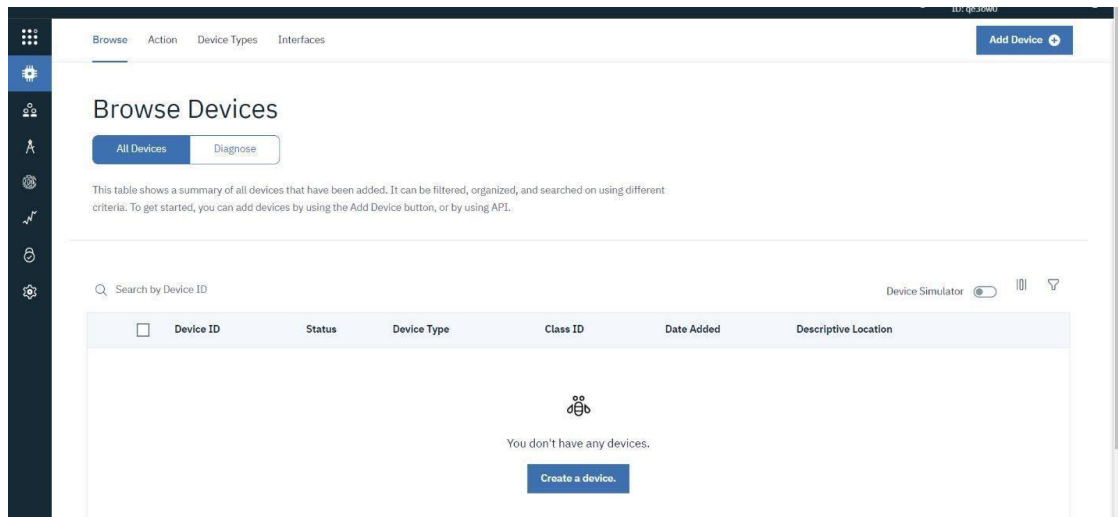

11. Fill in the information to create a device by logging into the Watson Cloud.

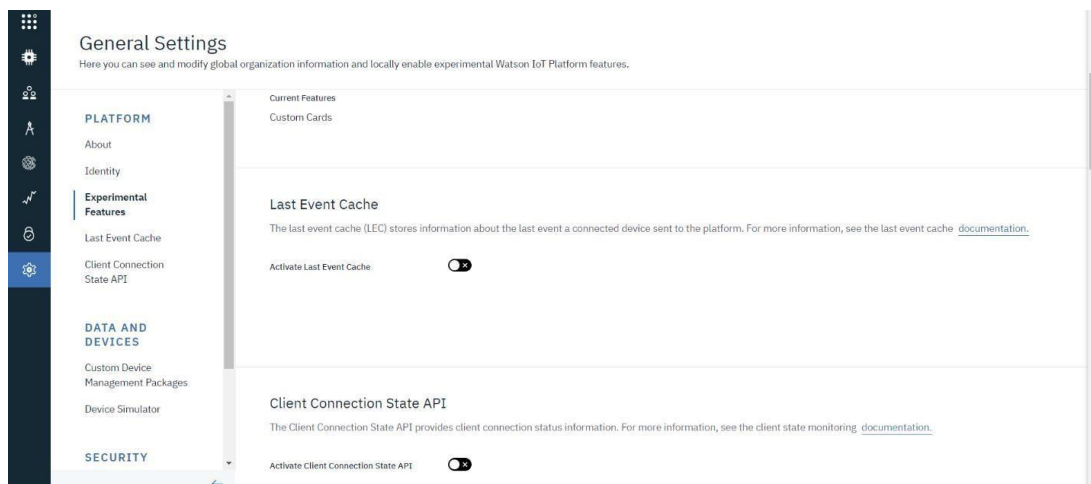

12. After logging in, the name is displayed and the page returns to the home page.

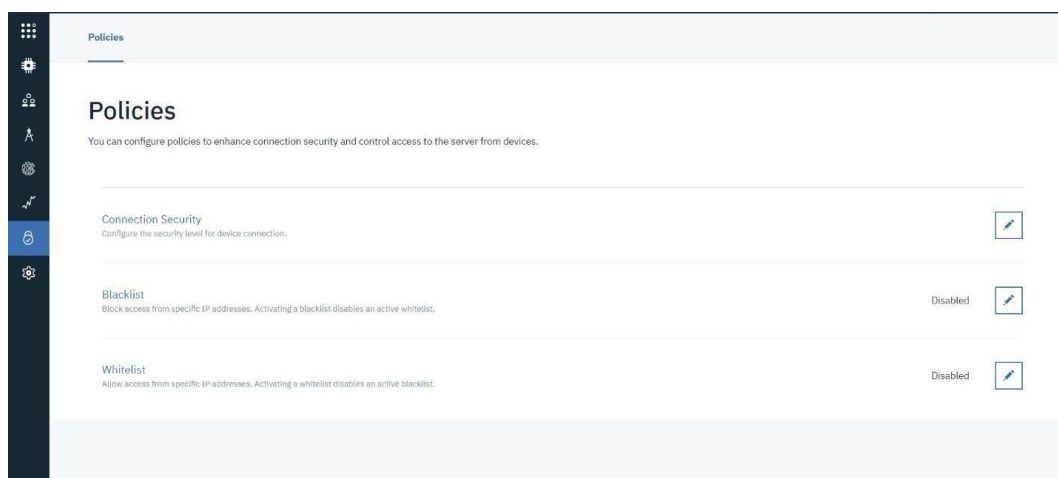

13. Clicking the launch button once more will open this tab, which contains a tool for creating and adding devices as well as for displaying information about them.

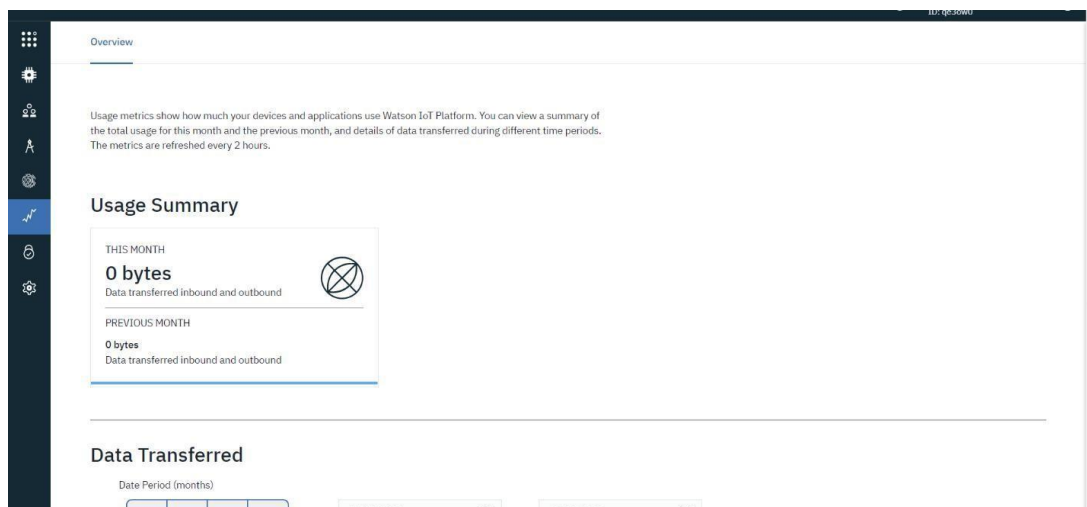

14. If necessary for the project, the general setting can be changed using the setting tab.

15. We can change the type of security connection and the specification in the security tab.

16. Usage summarises the amount of data transferred between the devices and the IBM cloud.

17. The team members are added to the platform through the member tab.

The screenshot shows the 'Browse Members' page. It includes a search bar, a table with columns for Email Address, Name, Role, Added By, and Expires, and a button to 'Add Members'.

Email Address	Name	Role	Added By	Expires
worldisfullofmeow@gmail.com	worldisfullofmeow@gmail.com	Administrator	-	-

18. When you want to connect to another platform and integrate with other services, you use this tab.

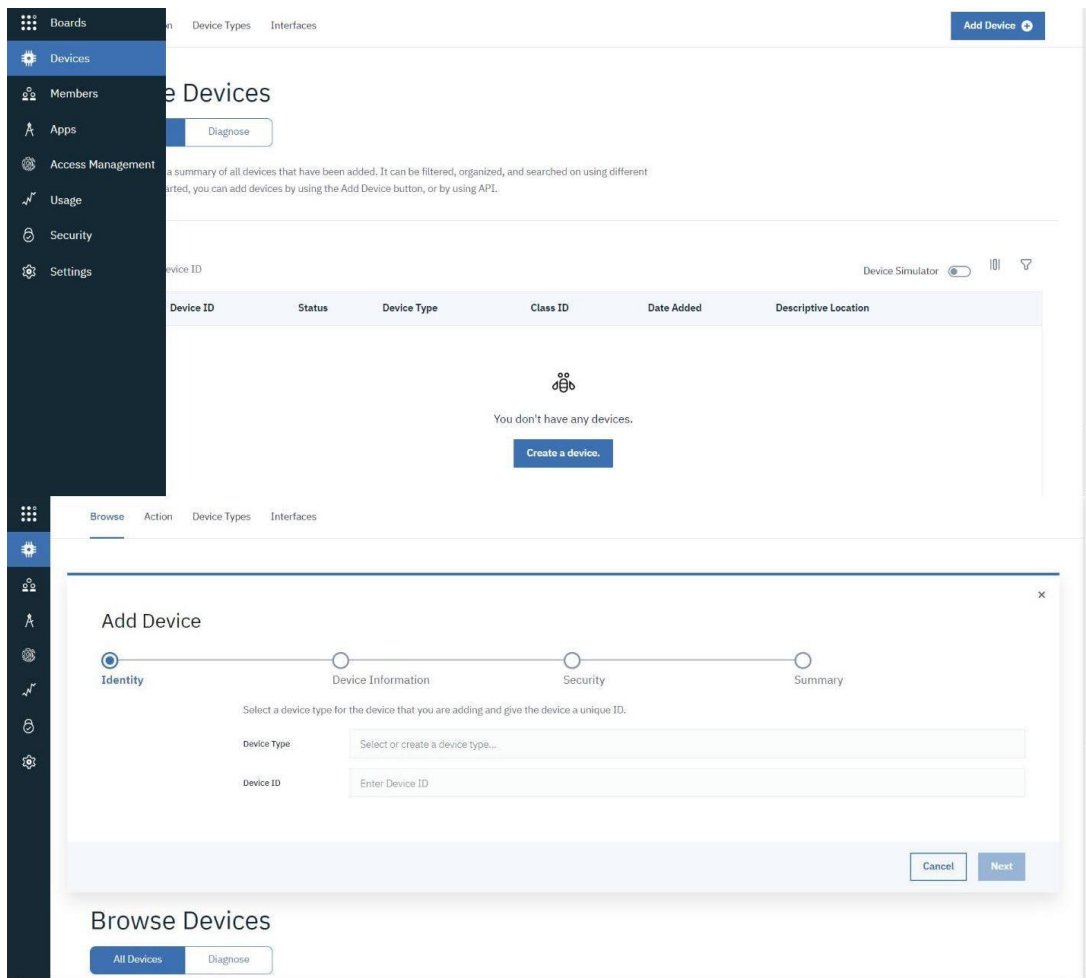

The screenshot shows the 'Browse API Keys' page. It includes a search bar, a table with columns for Key, Description, Role, and Expires, and a button to 'Generate API Key'.

Key	Description	Role	Expires
0 results			

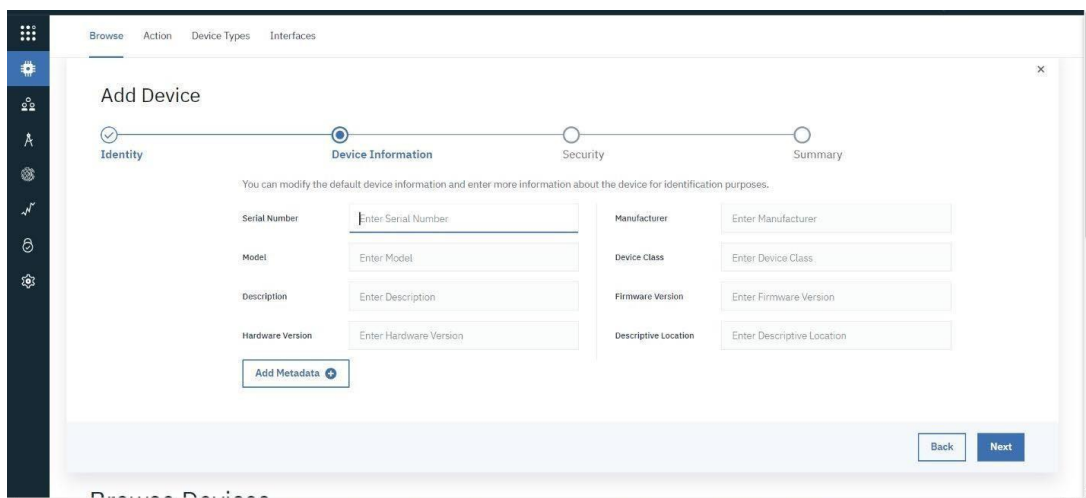

There are no API Keys

Generate API Key

19. Select the device tab, select Add Device, enter the device type and device id, and select Next.

20. This page to add additional information and of the hardware

21. After clicking next, the security screen appears, where we perform authentication token id.

**Add Device**

Identity Device Information **Security** Summary

There are two options for selecting a device authentication token.

**Auto-generated authentication token (default)**

Allow the service to generate an authentication token for you. Tokens are 18 characters and contain a mix of alphanumeric characters and symbols. The token is returned to you at the end of the device registration process.

**Self-provided authentication token**

Provide your own authentication token for this device. The token must be between 8 and 36 characters and contain a mix of lowercase and uppercase letters, numbers, and symbols, which can include hyphens, underscores, and periods. Do not use repeated characters, dictionary words, user names, or other predefined sequences.

Authentication Token: 1997199520012005

Make a note of the generated token. Lost authentication tokens cannot be recovered. Tokens are encrypted before being stored. Authentication tokens are encrypted before we store them.

22. After selecting Next, the device's summary is displayed. Finally, select Finish.

**Add Device**

Identity Device Information Security **Summary**

Verify that the following information is correct then select Finish

Device Type  
Nodemcu

Device ID  
199795

[View Metadata](#)

Security Token  
1997199520012005

[Back](#) [Finish](#)

23. A detailed display of the device credentials will appear. Protect the device information because authentication tokens are non-recoverable and must be created anew if lost..

We can now see the newly inserted device by clicking the device tab. The further information will be shown when you click on it. There are several tabs on it, including Identity, Device Information, State, and Login. According to the specifications of our project, we can similarly create n number of devices with a 50 per page limit.

The project cards will be displayed on the boards.

**Your boards** [Public boards](#) [+ Create New Board](#)

**USAGE OVERVIEW** 3 Cards Owned by you

**RISK AND SECURITY OVERVIEW** 4 Cards Owned by you

**Boards shared with you**

## **CONCLUSION:**

A device and an IBM Watson cloud are developed.
